YOUR OT SECURITY JOURNEY

Where are you on your OT security journey?

Every OT security journey starts at a different point. **See every asset. Assess every risk. Protect every operation.** Find the next step toward measurable OT risk reduction.

Start with the step that matches your environment today.

01 Discover

START HERE IF

You don't yet have a complete picture of your OT environment.

02 Assess

START HERE IF

You already have visibility, but need to know which risks matter most.

03 Protect

START HERE IF

You know your priorities and are ready to reduce operational risk.

No matter where you begin, every step moves you closer to reducing OT risk.

Keep the operation running.
Operations-first OT security.

STEP 01 · DISCOVER

01 See everything. Even what's hidden.

YOU'RE PROBABLY HERE IF

- [ ] Your OT asset inventory is incomplete or out of date.
- [ ] You're unsure what's actually connected across every site.
- [ ] You know risk exists—but you don't yet have the full picture.
- [ ] You're expanding to new or acquired sites.
- [ ] You need a trusted baseline before making security or investment decisions.

YOUR GOAL

Before you can reduce OT risk, you need confidence that you're seeing the whole environment and not just what's already monitored. A trusted operational baseline gives every future decision the context it depends on.

WHAT YOU ACHIEVE WITH TXONE

- ✓ Complete visibility across your OT environment including assets other tools often miss.
- ✓ Confident discovery across sites, production lines, and remote environments without disrupting operations.
- ✓ A trusted operational baseline that supports every future security and investment decision.

YOU NOW HAVE

Confidence that you're seeing the whole OT environment.

STEP 02 · ASSESS

02 Know your exposure. Prioritize what matters first.

YOU'RE PROBABLY HERE IF

- [ ] You have visibility, but no clear answer to what's actually urgent.
- [ ] Your visibility doesn't yet reach every site, line, or remote environment.
- [ ] You've assessed once, but nothing tracks how risk changes over time.
- [ ] You're deciding which sites or investments to prioritize across the business.
- [ ] You need to explain OT risk, and what you're doing about it, to leadership.

YOUR GOAL

A comprehensive assessment transforms visibility into prioritized recommendations and a practical roadmap, so you know what to address first, what can wait, and how to reduce OT risk with confidence.

- Which risks actually matter?
- Which systems can't be taken offline?
- Which sites should be addressed first?
- Which actions reduce the most risk and which can wait?

WHAT YOU ACHIEVE WITH TXONE

- ✓ A clear understanding of your OT security posture and where operational risk is concentrated.
- ✓ Prioritized recommendations focused on the actions that reduce risk first.
- ✓ A practical roadmap that guides protection decisions across your OT environment.
- ✓ Executive-ready insights that support planning, investment, and long-term cyber resilience.

YOU NOW KNOW

Which risks deserve attention first.

STEP 03 · PROTECT

03 Enforceable protection. Zero disruption, always.

YOU'RE PROBABLY HERE IF

- [ ] You can detect threats, but responding still disrupts production.
- [ ] Removable media and third-party devices aren't consistently controlled before entering the OT environment.
- [ ] Security changes require planned maintenance windows to deploy.
- [ ] Security controls aren't consistently enforced across daily operations.

YOUR GOAL

Once you understand your environment and know which risks matter most, protection becomes the next logical step. Security moves from reports and recommendations into everyday operations - reducing exposure, minimizing disruption, and adapting as your environment changes.

WHAT YOU ACHIEVE WITH TXONE

- ✓ Continuous protection for OT endpoints and critical assets without disrupting operations.
- ✓ Greater control over removable media, portable devices, and other common sources of OT risk.
- ✓ Security that continuously adapts as your OT environment and operations evolve.

WHERE TO NEXT

You know where you are. Let's determine what comes next.

Discover, Assess, or Protect — we'll help you build the next phase of your OT security journey.
